

10. 文件排序对话框

- 先定义排序类型和默认选中索引两个变量

```
index.vue
241 |   }
242 |
243 |   // 文件排序相关
244 |   const sortIndex = ref(0)
245 |   const sortOptions = ref([
246 |     {
247 |       name: '按名称排序'
248 |     },
249 |     {
250 |       name: '按时间排序'
251 |     }
252 |   ])
253 | </script>
```

- 在页面中加入排序对话框

```
index.vue
348 |   </view>
349 | </view>
350 | </uni-popup>
351 |
352 | <!-- 文件排序对话框，由底部弹出，遍历排序操作数组 sortOptions，为当前选中的索引项绑定蓝色文字样式 -->
353 | <uni-popup ref="sortPopup" type="bottom">
354 |   <view class="bg-white">
355 |     <view v-for="(item,index) in sortOptions" :key="index"
356 |       class="flex align-center justify-center py-3 border-bottom border-light-secondary"
357 |       :class="index === sortIndex ? 'text-main':'text-dark'" hover-class="bg-light"
358 |       @click="changeSort(index)">
359 |       {{ item.name }}
360 |     </view>
361 |   </view>
362 | </uni-popup>
363 |
364 | </view>
365 | </template>
```

- 添加 openSortPopup（打开排序弹出框）和 changeSort 方法，根据排序类型的索引切换不同的排序（具体功能等前后端联调再实现）

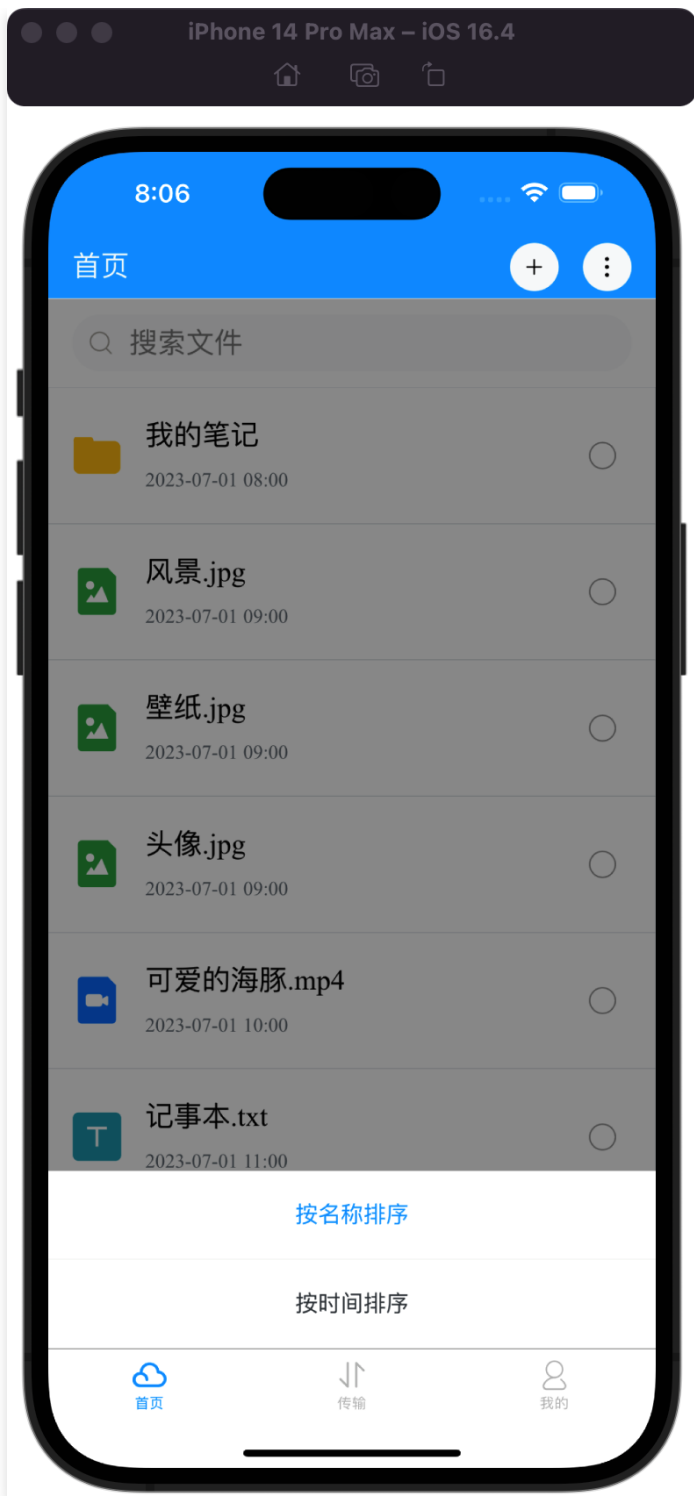

index.vue

```
241 |   }
242 |
243 |   // 文件排序相关
244 |   const sortIndex = ref(0)
245 |   const sortOptions = ref([
246 |     {
247 |       name: '按名称排序'
248 |     },
249 |     {
250 |       name: '按时间排序'
251 |     }
252 |   ])
253 |
254 |   const sortPopup = ref(null)
255 |   const openSortPopup = () => {
256 |     sortPopup.value.open()
257 |   }
258 |   const changeSort = (index) => {
259 |     sortIndex.value = index
260 |     sortPopup.value.close()
261 |   }
262 | </script>
```

- 为顶部导航栏的“更多”图标绑定 openSortPopup 方法

```
<!-- 选中个数为0 -->
<uni-nav-bar v-if="checkedList.length === 0">
  <template #left>
    <text class="font-md ml-3 text-light">首页</text>
  </template>
  <template #right>
    <view style="width: 60rpx;height: 60rpx;">
      class="flex align-center justify-center bg-light rounded-circle mr-3" @tap="openAddPopup">
        <text class="iconfont icon-zengjia"></text>
      </view>
    <view style="width: 60rpx;height: 60rpx;">
      class="flex align-center justify-center bg-light rounded-circle mr-3" @tap="openSortPopup">
        <text class="iconfont icon-gengduo"></text>
      </view>
    </template>
  </uni-nav-bar>
```

运行效果，点击顶部导航栏最右边的“更多”图标，底部弹出文件排序对话框

```
commit d781bcfffb008ca588eff0ee7cb6f7f48438714dc (HEAD -> main)
Author: mxu <moqi1977@gmail.com>
Date: Sun Jul 2 18:53:01 2023 +0800
```

文件排序对话框
