

13. 注册登录页

新建 login 页面，配置 pages.json，去掉默认导航栏，并且设置该页面的状态栏颜色为黑色（注册登录页不设顶部导航栏，且背景色为浅色，所以如果状态栏还是全局设置的白色，就看不到了）

```
{
  "path": "pages/login/login",
  "style": {
    "navigationBarTextStyle": "black",
    "app-plus": {
      "titleNView": false
    }
  }
},
```

纯静态页面，参考代码如下：

```

<script setup>
  import {
    ref
  } from "vue"

  // 登录或注册类别
  const type = ref('login')

  // 表单对象
  const form = ref({
    username: '',
    password: '',
    repassword: ''
  })

  // 切换注册或登录
  const changeType = () => {
    type.value = type.value === 'login' ? 'reg' : 'login';
  }

  // 按钮点击事件
  const handleClick = () => {
    if (type.value === 'login') {
      uni.switchTab({
        url: '../index/index'
      });
    }
  }
</script>

<template>
  <view style="height: 100vh;" class="bg-light">
    <view style="height: 44px;"></view>
    <view class="flex align-center justify-center font-lg text-muted"
      style="margin-top: 100rpx;margin-bottom: 100rpx;">
      千度云盘
    </view>

    <view class="px-4">
      <input type="text" v-model="form.username" class="uni-input bg-white rounded mb-4 text-muted" placeholder="手机号/用户名" />
      <input type="text" v-model="form.password" class="uni-input bg-white rounded mb-4 text-muted" placeholder="请输入密码" />

      <!-- 如果是注册，才显示确认密码框 -->
      <input v-if="type === 'reg'" type="text" v-model="form.repassword" class="uni-input bg-white rounded mb-4"
        placeholder="请输入确认密码" />
      <view class="bg-main text-white flex align-center justify-center font-md py-2 rounded-circle"
        hover-class="bg-main-hover" @click="handleClick">
        {{ type === 'login' ? '登录' : '注册' }}
      </view>
    </view>

    <view class="flex align-center justify-center pt-5">
      <view class="text-main mx-2 font-sm" @click="changeType">
        {{ type === 'login' ? '去注册' : '去登录' }}
      </view>
    </view>
  </view>
</template>

```

效果

```
commit 2d7ccb11079ebc2b75e839ca4d341ed0eebbb7f7 (HEAD -> main)
Author: mqxu <moqi1977@gmail.com>
Date: Sun Jul 2 23:05:01 2023 +0800
```

注册登录页
